RoHS Policy Statement

The European Union's Regulation of Hazardous Substances (RoHS) directive is now in force for all covered products put on the market after July 1, 2006. For the past six months SP Industries' RoHS team has evaluated and addressed compliance issues related to this regulation.

The RoHS directive prohibits the use of six substances - Lead, Cadmium, Hexavalent Chromium, Mercury, Polybrominated Biphenyl (PBB), and Polybrominated Diphenyl Ether (PBDE) - in ten categories of equipment. The purpose of this and the earlier Waste Electrical and Electronic Equipment (WEEE) directive is to substantially eliminate these substances from the waste stream. Additional regulations are being considered in many other jurisdictions outside of Europe, including some in the United States.

After careful study we have determined that SP Industries' products are not within the current scope of the RoHS regulations.

Even though our products are exempt from the regulations, we have aggressively pursued becoming compliant, working closely with our plastics and electronics component suppliers. This is an on-going effort within SP Industries to provide the safest, most environmentally friendly, and effective products to meet our customers' needs.

Our SP Industries RoHS team continues to monitor the evolving regulatory environment in Europe and elsewhere, taking appropriate actions as required.

Please direct any questions or concerns about RoHS and the compliance status of any of our products to:
